PROFESSIONAL SUMMARY

Passionate game engineer with 4 years experience building across VR, mobile, and PC. From AAA pipelines to TV tie-in apps, I bring adaptability, a strong work ethic, and a drive to keep growing. Known for clean technical execution, cross-team collaboration, and taking ownership of complex initiatives.

SKILLS

Languages: C#, C++, Java, C, JavaScript

Game Engines: Anvil, Unity, Unreal, Snowdrop

Tools: Visual Studio, Perforce, Git, Jira, Miro

WORK EXPERIENCE

Red Storm Entertainment, Raleigh, NC | *Senior Gameplay Engineer* March 2026 – Current

- Promoted to Senior Gameplay Engineer in recognition of skills growth, achievements, and complex system ownership over the past years

Red Storm Entertainment, Raleigh, NC | *Gameplay Engineer* April 2022 – March 2026

Assassin's Creed Nexus VR - Quest 2

- Built and extended Unity-based VFX tooling in C# alongside Tech Artists, expanding priority/cost weighting and LOD controls that optimized both performance and accuracy with effects across VR scenes
- Took ownership of User Sign-in Flow in the final 6 months pre-launch, resolving a blocking console to service integration by architecting a new sign-in core flow, solution was later adopted as the standard across other Ubisoft VR titles to ensure continuous telemetry

Ubisoft's Mythic Quest Season 4 - Quest 2 / PC demo

- Led a team of 4 to deliver a fully playable, film-ready Unity VR cooking game; Built gameplay systems and SDK integrations; Personally filmed for the production
- Unity development of a polished Animal Crossing-style game with a small team, delivering core gameplay features and demoed for production

Amazon's The Summer I Turned Pretty Season 3 - Mobile iOS

- Led a team of 5 to build a Mario-style iOS game in Unity from the ground up within 10 weeks
- Designed and implemented multiple powerups and a system for parallax backgrounds
- Shipped via TestFlight to cast and production stakeholders under evolving production requirements

XDefiant - PC/Xbox/Playstation

- Resolved critical, high priority projectile collision bugs in Snowdrop
- Corrected trajectory projection and enforced client/server projectile position sync, eliminating hit detection failures by 90%

Tom Clancy's Rainbow Six Siege, Brand Tech Team

- Led the Auto-Testing Initiative in Anvil, refactoring the C++ test runner infrastructure to be data-driven
- Expanded automated coverage from 1 game mode to all core live game modes
- Enabled significantly faster expansion of test coverage across new scenarios, enabling 10 new tests within the month

Anvil Pipeline, Characters and Animation

- Addressed user-reported friction bugs in our Animation software
- Close collaboration with expert and lead animators to improve quality of life

EDUCATION

North Carolina State University Raleigh, NC

B.S. Computer Science, Game Development

Honors: Summa Cum Laude (3.86/4.0)

August 2018 – December 2021
